## SUMMARY

I am highly enthusiastic about tech and wish to make my future bright in it. I am a quick learner and hard-working student currently studying BIT.

I have a knack for understanding code and coming up with my own logic to solve various problems that come up during development. I try to adapt to the condition and come up with solutions.

## SKILLS

- html/css/javascript - Skillful
- Python & Django - Skillful
- React js - Skillful
- Java - Beginner
- Java(Hibernate, Spring boot, Database) - Novice

## LANGUAGE

- Nepali (Native) ● ● ● ● ●
- English ● ● ● ● ○

## REFERENCES

## EDUCATION

### Bachelors in Information Technology

Phoenix College of Management / kathmandu / March, 2021 - Present

### +2 in Science

New Summit School / kathmandu / May, 2019 - May, 2021

passed +2 in Science with cumulative GPA of 3.19

### SEE

Sandipani Gyan Mandir Public School / kathmandu

Passed SEE with cumulative GPA of 3.65

## TRAINING/CERTIFICATION

### Spring boot and Framework

Phoenix college of Management

I had taken boot camp on spring-boot/hibernate and rest APIs. Taught by Arjun Rokaya sir, I was able to learn how a web app works.

**FullStack with Django and React js**

Dursikshya Education Network / 2023

I have completed the course of Durshikshya education network on FullStack course on Python with Django and React js taught by Rajendra Kandel sir . In this course I was able to learn from html/css/javascript to react js and django and how to integrate them with restful api.

I am currently doing a project to submit for full certification.

**PROJECTS****Tourism Website**

It was for a project competition in Durshikshya. With help from my friend, we were able to do a Django-only web app that can add locations and show them. By doing this, I got to understand the logic on how Django works and how to implement it.

**Mero-Pasal**

An e-commerce web application that uses React js as the frontend and is connected with Django backend with rest API. I am currently working on this and is about 50% complete.

It is inspired by Shopify where there are two users, one is a normal customer and other is a Seller.
